EDUCATION

Vishwakarma Institute of Technology **Pune, Maharshtra, India**

Bachelor of Technology in Computer Science and Engineering- Artificial Intelligence and Data Science Current CGPA: 8.6/10.0 **Sept 2024 - Sept 2028**

Relevant Coursework: Data Structures and Algorithms, Object Oriented Programming, Database Management System, Computer Network, Operating Systems, AI&ML.

PROJECTS

ValidatorAI — AI-Powered Startup Idea Validation Platform

React, TypeScript, Tailwind CSS, Google Gemini API, Express.js, SQLite | [GitHub] | 2026

- Built a full-stack AI startup validation platform using React, TypeScript, Express.js, and SQLite to evaluate startup ideas across market, competition, technology, finance, and risk dimensions.
- Integrated Google Gemini and Google Search grounding to generate research-backed market analysis, competitor intelligence, and citation-supported insights from real-world sources.
- Designed a schema-constrained JSON reporting pipeline covering TAM/SAM/SOM, CAGR, competitors, business model, technical complexity, funding requirements, risks, and next steps.
- Developed RESTful APIs and SQLite persistence for report creation, retrieval, updates, and deletion, with localStorage caching for responsive client-side access.
- Implemented a GO / CAUTION / NO-GO verdict engine that converts multi-dimensional startup analysis into an actionable investment-style recommendation.

ML-Based Demand & Renewable Energy Forecastinhg

Python, Pandas, NumPy, Scikit-learn, XGBoost, SHAP, Streamlit, Altair | [GitHub] | 2026

- Built an end-to-end electricity demand and renewable-energy forecasting system integrating 46K+ hourly records from demand, weather, solar, and wind datasets.
- Engineered 58 leakage-safe temporal and contextual features and evaluated multiple ML models, including Linear Regression, Random Forest, HistGradientBoosting, and XGBoost, with automated model selection using RMSE, MAE, and MAPE.
- Developed a recursive forecasting pipeline producing hourly, daily, weekly, and monthly forecasts up to 12 months, with 95% prediction intervals, followed by renewable-battery dispatch and grid-backup simulation.
- Built a Streamlit decision-support dashboard with real-time and what-if scenarios, battery SOC tracking, SHAP explainability, and CO_2/cost impact analysis for renewable-energy dispatch.

ACHIEVEMENTS

- **Research Publication — ASIACONF-2026:** Published and presented a research paper on soft constraint matching and counterfactual explainability for government welfare scheme recommendation. ***[Certificate]***

SKILLS

- **Programming Languages :** C++, Python, SQL, JavaScript
- **Web Development :** HTML, CSS, React.js, Tailwind CSS, Node.js, Express.js, REST APIs
- **Databases :** MySQL, MongoDB
- **AI/ML**: Pandas, NumPy, Scikit-learn
- **Deployment :** Vercel, AWS
- **Tools :** Git, GitHub, Docker, Postman, MongoDB Compass
